

AMBRA MATTRESS

Height

23 cm

Top Coating

Fabric: Polyester microfibre

Padding: Myform Memory

Technology

Standard box

Reinforcement perimeter structure ideal to allow the springs to always function perpendicular to the resting plane.

LFK spring system

An interconnected system consisting of cylindrical springs that ensure excellent support, great elasticity and - thanks to their compact size - ergonomically accurate reactivity wherever the body is in contact with the mattress. The springs are solid and resistant, and connected to each other by spirals running transversely through the mattress. The connection system joining the springs makes the whole mattress robust and durable.
