## LIFE MATTRESS

**Hybrid**

**Removable cover**

**U-Safe**

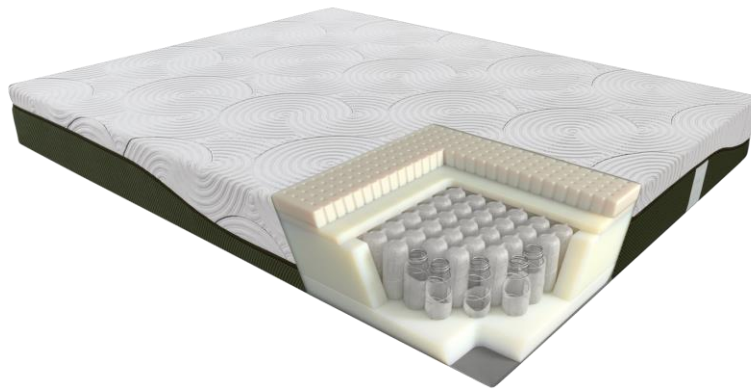

### Height

26 cm

### Top Coating

Fabric: Cotton, Polyester microfibre

## LIFE MATTRESS

**Removable cover**

**U-Safe**

### Technology

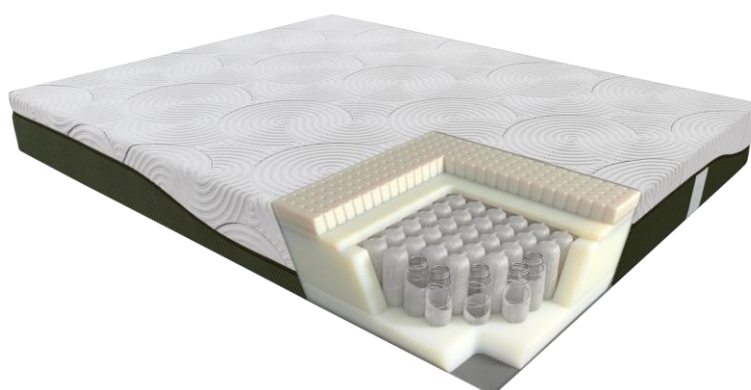

#### Box with Latex

Box coupled at the top with a layer of latex. The perimeter structure maintains the reinforcement characteristics, to allow the springs to always function perpendicular to the resting surface, to which is added the benefit of latex, a material that makes the comfort of the mattress different from all the others, maintaining high breathability and hygiene levels."

#### Adaptive spring system

Adaptive is a system with three independent types of pocketed springs with different degrees of rigidity. Adaptive springs vary in terms of the gauge of the wire, which provides different levels of support. The three types of spring are arranged in an innovative pattern inside the mattress to create areas of varying rigidity which maintain a constant reaction to the different pressure of the body on the mattress. To facilitate getting onto and off the mattress, the perimeter contains more rigid springs.
