TRESSOR MATTRESS

Hybrid

Removable cover

Height

31 cm

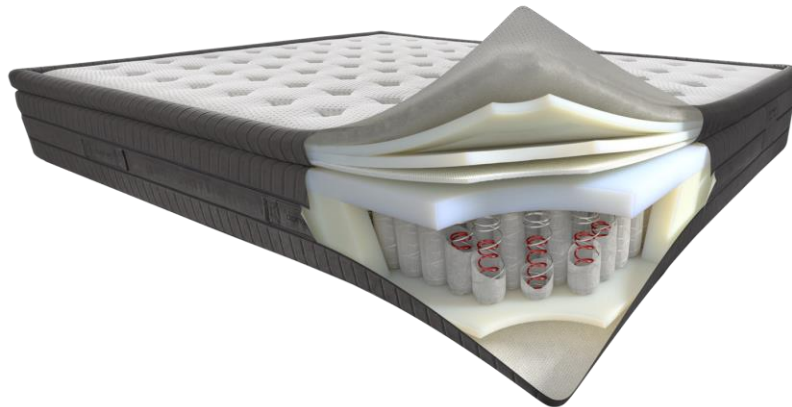

Top Coating

Fabric: Viscose and Polyester Microfibre

Padding: Silk, Cotton, Ingeo, Myform Extension Extra Soft

Fabric: High-resistance fabric

TRESSOR MATTRESS

Hybrid

Removable cover

Technology

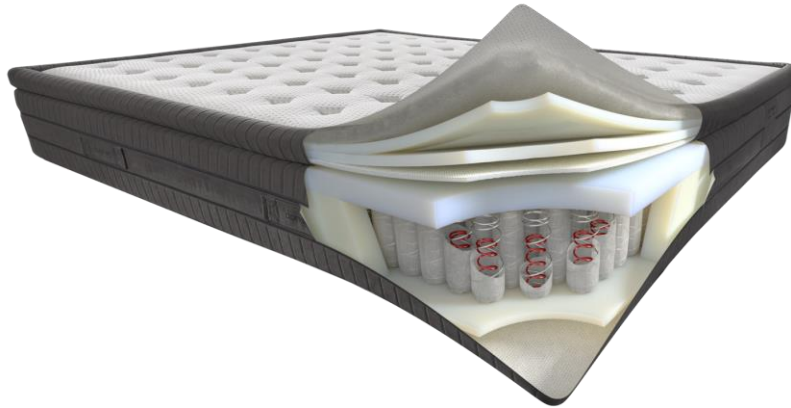

Box with Myform Memory Air

Box combined with a layer of Myform Memory Air on the top. It has a reinforcement function, to allow the springs to always function perpendicular to the resting plane, to which is added the benefit of the ergonomics of the Myform Memory Air and its porosity capable of disposing of the humidity emanating from the body while it rests.

Myform Memory Air

This technology is designed to offer the optimum combination of comfort and breathability. The innovative molecular structure allows Myform Memory Air to adapt very precisely to the shape of the body, adjusting the degree of support and the elastic reaction on the basis of demand, while the high porosity ensures the correct movement of air for cool sleeping.

Technology

Twin spring system

A system of independent pocket springs featuring a twin concentric coil that provides the ideal balanced support for any body type and in any sleeping position. The external spring guarantees comfort and ergonomics; the inner one gives increased support in response to greater body pressure on the mattress. The springs are distributed over seven different areas, each calibrated to adapt to the pressure of the body and offering progressive yield on the basis of the points of contact.

Bottom Coating

Fabric: Cotton, Polyester microfibre
